

## THSeeds - Akorn

Akorn is back in feminized only. Akorn (aka Snowbud) is a mostly indica cannabis strain from the North Western USA originally brought over in 1995.

The name Akorn was given to the plant by the people who grew it because of its hard finished structure with tight cola's the size of `baby arms` making it a great producer. The people who smoke this type called it Snowbud because of its incredible resin production. Whatever you want to call this plant, growers and smokers will simply call it their favourite.
