

## Reflector - Extra V

The Extra V reflectors have a reflection value of a staggering 95%. You will definitely be getting value for money! This new reflector reflects more light, up to a maximum of 62% more, than the already existing 47cm reflectors.

The greater the reflection value, the better your plants will grow. The enhanced reflection of light will also affect the lower parts of the plants positively. Choose between a Hammertone or Mirror finish depending on your personal situation.
