

Reflector - Megalux

Kiwiland Growshop introduces the new Megalux reflector. In cooperation with Agro-Trading and a renowned technical research institution we have achieved an amazing result after extensive testing and development. This took lots of research concerning the right ratios between various sorts of materials, measurements and components. It is now possible to shine as much light as possible on a surface of 1m2.

The hammertone reflector is an innovation in reflection: the aluminium is treated by a laser. For this the best aluminium is used (99.9%) available. Apart from that, the aluminium is also subjected to machines that have been developed to be able to produce the newest techniques on the area of reflection. Agro trading has opted for three kinds of different reflectors: the mirror, the hammerstrike with a reflection value of 96%, and the revolutionary new hammertone reflector.
