

Boxed extractor fan - metal

These fans are truly powerful and quiet and have to be heard to be believed.

All of our Extractor Fans should be run via one of our fan controller units.

An easy equation to find out how much air extraction you'll need for your room is HALF THE TOTAL WATTS OF THE LAMPS + 20%.

So for instance a room with 4 x 600W lamps:

$$600 \times 4 = 2400$$

$$1/2 = 1200$$

$$+20\% = 1440$$

This room will need an extractor fan and [carbon filter](#) with a capacity of atleast 1440m³. Always round up so a 1500m³ extractor + a 1400m³ carbon filter is perfect.
