

Danish Libra trays

The DanisLibra tray is a popular system for all kinds of growing techniques but especially rock-wool slabs. A 1x1m tray is perfect for 5 rockwool slabs with 5 plants in each slab. An equally successful technique is using 9-12 10lt round pots with soil and sprinkler system. Trays can be mounted on a frame and drainage can be connected in series using PVC pipe and fittings, making flushing an ease. These trays can also be used in a low and high tide system.
