

Canna - Boost accelerator

Cannaboost is Canna's powerful flowering stimulator, specially developed for fast growing plants, it improves quality and increases yields. Cannaboost stimulates the development of flowers that have formed recently and this can make the fruits fuller than normal. This also results in a more homogeneous harvest because the fruits mature gradually. Something very special about Cannaboost is that it doesn't just guarantee higher yields but also better taste. Something extra for the Canna grower.

Suitable for every grow medium or substrate Cannaboost is a universal flowering stimulant which means that it can be used in every cultivation system in combination with every kind of feeding without exception. As well adding Cannaboost to the nutrient solution, it can also be used as a leaf spray. The advantage of this is that the plant can absorb the flowering stimulant directly via the leaves.
