

Canna - Zym

CANNAZYM is a high-quality enzyme product. It consists of more than 12 different kinds of enzymes to which vitamins and extracts of desert plants are added. CANNAZYM speeds up the process of breaking down dead root material and activates the micro-organisms. In addition to this, CANNAZYM facilitates the improved absorption of nutrients and increases the resistance against pathogenic organisms.

In a root system that functions well, roots die and new roots are formed. The remains of roots that died form an ideal growing substrate for pathogenic organisms. After the pathogenic moulds have multiplied in the dead root material, they are a threat to the healthy roots. These are easily affected, and will lose an important part of their function. This causes stress to the entire plant and stunts any new growth.
