

BAC - Soil nutrient - Bloom

The complete NEW fertilizers of B.A.C are specially developed for all growers (easy to use). B.A.C works with partial 99.9% biological stimulators to keep the biological taste of the product. For the maximum weight B.A.C produces a very high quality concentrated chemical fertilizer for soft or hard water. This means a maximum yield and a very good quality at the end. All the B.A.C stimulators, fertilizer and boosters are very concentrated and we use high-quality trace elements. B.A.C gives with the fertilizers an excellent leaflet, which has all the information on how to grow on soil, coco and hydro systems and also how to use the B.A.C fertilizers. You can find in this leaflet a plan for how to work with ph in the medium, and also an info text with the most commonly asked questions from growers and the accompanying solutions.

Strong concentrated 1 component SOIL-fertilizer for the grow or bloom period, with the best high quality trace elements. To use with full soil or pots. Concentration 1:250.
