

Mr Nice Seed Bank - Early Queen

Since the beginning of the 1990s, this three way hybrid has earned acclaim in the cultivators world. It is quick to finish both indoors and outdoors and is, therefore, perfect for cold climate countries in the northern hemisphere.

The flowering cycle is expected to be between 6-8 weeks with indoor cultivation. Expect harvest time in the northern hemisphere as early as September and in the southern hemisphere by March. The yields will surprise the victims. The genetic composition of this breed stems from early Californian blends mixed with a touch of Mexican. So, Signor Cultivator, enjoy your Early Queen and her fruits like a happy farmer should, real early, real juicy, and the real thing!
