

Mr Nice Seed Bank - Nevilles Haze X Afghan Skunk

A lot of growers have waited patiently for several years to get the original Neville's Haze seed for their garden, so we at MNS thought it would be a special thing for those and other growers to have the chance to try to find something very practical, as well as containing all of those original and special genetics sought after by so many in the elite part of the Cannabis world. Now finding something special is attainable with less trial and error work. The best thing to do is to narrow things down to a maximum of 12 weeks, so plants that take longer should be discarded. Lower food levels may be advisable, but it will depend upon the type of grow medium and setup you have. The flavors held in this hybrid will be like biting into a rainbow...almost everything you ever tasted will dance upon the senses, and its effect will astound. It really would help those Medical growers who go the extra yard to find a tailor made medicine. Yields of 450 -650 grams would be the expected but if this plant is grown in a greenhouse or outdoors then give it space as it will blow you away, leaving the air around it feeling claustrophobic. This hybrid will have phenotypes in it that can be finished in 10 weeks, but most will go an extra week or two. In an outdoor grow in the northern hemisphere it will be ready mid to late October. In the southern hemisphere it will be expected in April. Be warned if you find what you are looking for you may never grow another plant!
