

Bluelab - Soil PH meter

If you need to measure the pH level of soil, media or substrates, then the Bluelab Soil pH Meter is just what you need! Our Meter can be used by everybody from the home enthusiast through to more robust commercial applications.

In soils or growing media, pH strongly influences the availability of nutrients and the presence of micro-organisms and plants in the soil. Certain plants require a particular pH range to enable the required nutrients to be consistently available to the plant. If the solution is too acidic or too alkaline it can cause "lock up" - a situation which restricts certain elements essential for growth from being absorbed by the root structure. This in turn reduces plant health and performance. Deficiencies in the required elements become apparent in plant growth and can lead to crop failure.

Attributes

Category	Control & Measure
Sub category	PH & EC control
Brand	Bluelab

Specifications

Functions	measures PH in the soil
PH range	0-14
Factory calibrated	temp Yes
Guarantee	5 years (6months on probe)
Extra features	auto off, lightweight, push button calibration

Price table

Product label	Product code	Price exc.	Vat	Price inc.
Soil PH meter	GCON1225	186,07 euro	21.0 %	225,15 euro
Soil PH (probe only)	GCON1226	93,51 euro	21.0 %	113,15 euro
