

Morning Glory seeds

The most visual of the LSA seeds, these give a mentally and physically stimulating high. Lines blur and shapes swirl, melting into each other as you come under the spell of the morning glory. A more sensory high, these amplify sounds and intensify colours to give you a psychedelic, exciting and entertaining trip. The active component is inside the seeds themselves, so they'll need to be crushed before you can consume them. These can be either eaten whole (you'll need to do a lot of chewing!) or extracted into a liquid to be drunk.

The best way to do this is to crush the seeds then leave them to soak in cold water for a few hours, then remove the seeds and drink the water. Your body can't digest the seeds if swallowed whole - they will just come out the other end! The intensity of your trip will depend on your sensitivity to the LSA and the amount taken - we recommend 60 as standard dose. Mild nausea is common after ingestion but should pass.
