

Advanced Nutrients - Wet Betty

Wet Betty is the leading non-ionic surfactant. It delivers nutrients, hormones and catalytic agents directly into roots and leaves. We tested hundreds of synthetic surfactants before finding the special ones used in Wet Betty.

Surfactant studies show that our surfactants improved membrane permeability and nutrient mobility, which resulted in a 3-6% increase in harvest yield even when the surfactants were used by themselves without any other ingredients. Wet Betty combines those powerful surfactants with nutrients, so your harvest increase is even larger. Wet Betty relieves the surface tension in root zone media so that nutrients and water are more easily absorbed by roots and root media.

When you're trying to get the most bang for every feeding buck, choose our Wet Betty for a slick way to get more into (and out of) your plants. Wet Betty is better than any other surfactant foliar product, or your money back.
