

Advanced Nutrients - Wet Betty - Organic

Wet Betty Organic is the worlds superior non-ionic surfactant. Our research scientists tested organic surfactants to find the ones that would best transport nutrients into your plants. Wet Bettys proprietary 100% organic surfactants deliver nutrients, hormones and bio-catalytic agents directly to leaves and roots for immediate use by plants.

Multiple, organic transfectants were blended to create this unique growth-enhancing formula. Wet Betty Organic contains naturally-occurring steroidal and triterpenoid saponins derived from Yucca and Quillaja, which are deserts plant known to contain many compounds that benefit plants and humans. These saponins help plants resist stress, manufacture phytohormones, and deliver larger harvests. Yucca and Quillaja extracts deter the development of root knot nematodes and other harmful fungi.

Wet Betty Organic includes aromatic terpenoids that contribute to nicer taste and aroma. Some people believe surfactant products are only useful for foliar feeding, but they are also useful in the root zone, where they lower the surface tension of root media such as soil and sphagnum moss so root media and roots can better absorb water and nutrients.

If you're an organic grower trying to get the biggest bang for every buck you spend on agricultural supplies, Wet Betty Organic is the slickest way to get more into (and out of) your plants.
