

G-kit Automatic irrigation

Working with an irrigation system has many advantages. It gives you the freedom to leave home for longer periods of time and it will increase your yields. For all our grow boxes we make special irrigation systems. Also for tent or self made garden we have convenient watering systems. All systems are complete and are supplied with a comprehensible manual. When using sterile media like rock wool we recommend a fully automated system. For (smaller) soil gardens the Blumat system is very practical.

The drippers are connected to a pump in the reservoir. The digital timer activates the preset watering moments. Ideal for growing on rock wool or cocos slabs.

All kits contains:

(Danish)tray

Aluminium grow table

Watertank

Pump

drippers

Tubing

Digital timer, Brennenstuhl.
