

Canna - AkTRivator

CANNA AkTRivator is a natural and organic product that protects your plants against soil diseases. AkTRivator stimulates the growth of roots and root hairs as well. It's suitable for young and older plants. AkTRivator can be used with all growing systems.

It consists of clay and beneficial fungi, called Trichoderma. There are two varieties: AkTRivator Powder and AkTRivator Granules. Strong and vital plants. AkTRivator stimulates the plants and increases the root environment. This results in a better root development, more root hairs and increased excretion of enzymes and hormones. As a result the plant gains more vitality and develops much better. Less chance of diseases. The so-called TRI 002 granules in CANNA AkTRivator have a positive effect on the production and the growth of the plant because they colonise the mould around the root system. They must be mixed with soil and provide for a strong and balanced growth of the mould. As a result of this, the development of other negative moulds and micro-organisms is greatly reduced. Balanced soil. CANNA AkTRivator suppresses micro-organisms and therefore has a positive effect on the balance between soil organisms.
