

Dutch Passion - Dutch Haze®

Dutch Passion customers have always craved a 100% Haze strain together with reduced flowering times and respectable yields. Over many years we have bred literally hundreds of Haze plants from both USA and Dutch genetics looking for this unique Haze. Then, in 2009, we had a major breakthrough!

The result is Dutch Haze, the flowering time is an incredible 9-11 weeks for a classy 'up-high' and true Haze experience. All Haze fans should try our Dutch Haze, the yields are generous and it grows with a rich abundance of sparkling THC covered flowers that have the true Haze aroma. Plants grow tall, 80cm - 120cm.

Dutch Haze is a rare find, the result of extensive breeding. The strain has good mould and spider mite resistance, it is 90% Sativa/10% Indica. However the Indica parentage affects only the flowering and yield characteristics. The smoke, as you will find out, is 100% pure Haze. Dutch Haze - prepare to be amazed.
