

Cannabis seeds for cool climate

If you are looking for outdoor cannabis seeds that are best suited for cultivation in colder climates, check out our inventory of outdoor seeds listed in this section. When cannabis is cultivated in colder climates, the main problem that growers face is the growth of moulds and infestation by pests.

But, all the strains in our outdoor cannabis seeds collection have the ability to resist moulds and pests very well with very little effort, which is why they are best for cultivation in places with cooler climatic conditions.

One more thing that growers need to take into consideration when choosing cannabis seeds for cultivating cannabis in cold climatic conditions is to opt for those with shorter flowering times so that they can finish early.

We offer the right cannabis seeds for the outdoor cold climatic conditions of your place, ensuring high quality, and great yields. All of these strains are hand-picked by our expert cannabis breeders to be grown in specific climates.
