

## Dinafem - Haze Autoflowering CBD

Haze Autoflowering CBD cannabis seeds by Dinafem Seeds belong to a Sativa-dominant, feminized, autoflowering cannabis strain that originates from the cross of a Haze XXL Autoflowering and a CBD-rich strain. Dinafem Seeds set out to create this cannabis strain in order to meet the demands of Haze and Sativa fans looking for a more gentle and bearable effect. That is why we can now enjoy a splendid Haze-like fast-flowering marijuana plant capable of improving a wide range of ailments and suitable for most types of users.

Thanks to its 1:1.3 THC/CBD ratio, Haze Autoflowering CBD is an excellent option for several therapeutic purposes. People suffering from physical and psychological problems will certainly enjoy the benefits of this not-so-potent CBD-rich cannabis seed. Regular consumption will not prevent them from leading a normal life.

In fact, its soothing properties are sure to bring many benefits. In addition, the original traits of the Haze lineage are kept intact and so neither its flavour nor its aroma have at all been altered.

Haze Autoflowering CBD cannabis seeds evolve into small bush-shaped marijuana plants that produce numerous branches full of compact resinous buds surrounded by such a reduced number of leaves that the after-harvest manicuring is just a piece of cake. When growing Haze Autoflowering CBD cannabis seeds, phenotypes develop beautiful orangey pistils that resemble those of tropical Sativa strains. If provided with an organic diet, the high quality of the end product is totally guaranteed, and if a 30% of coco is added to the substrate, it is sure to grow strong and healthy.

Haze Autoflowering CBD has a deep intense flavour and aroma, with hints of Haze and incense. The rather cerebral effect it provides is more than bearable. This strain, unique in the market, is ideal for alleviating muscle pain, for fighting stress and anxiety or just as a sedative.
