

## Kannabia - BCN Diesel

Its name says it all about this variety. This is a hybrid of the famous New York Diesel (original Chem- Draw from California) which we crossed with X Black Domina to reduce the flowering period and compact the flowers in the Domina style.

When growing your first BCN crop, you should bear in mind that it can easily reach a considerable size in next to no time, and remember that because of its hybrid structure the plant will grow several centimeters once the flowering starts.

When flowering, the plant demands large amounts of fertilizer. Although the lemon-green color of the leaves may mislead you into thinking that it needs more, this is not usually the case. Try to keep the EC levels during flowering between 1.8 and 2.2, so as not to over-fertilize the plant and saturate the roots. BCN Diesel will be ready in 8 weeks, although certain seeds may need another week to reinforce the flavour and ripen properly. We therefore recommend using carbohydrates from the second week of flowering onwards. Outdoors you will start the harvest during the second week of October.

### Product characteristics

Brand	Kannabia
Gender	Feminized seeds
Type	Greenhouse ; Outdoor ; Indoor
Genetics	Sativa Dominant
Flowering	60 - 70 days
Height	175 - 200 cm
Yield	500 - 600 grams per m2

### Price table

Product label	Product code	Price exc.	Vat	Price inc.
3 seeds (fem)	SDS-F-3-002	17,36 euro	21.0 %	21,00 euro
5 seeds (fem)	SDS-F-5-002	23,97 euro	21.0 %	29,00 euro
