

Kannabia - Kannabia Special

This variety achieved a second position in the indica category of the 2012 Medicinal Canada Cup. It has been highly valued for its medicinal and therapeutic effects.

This plant has highly noticeable indica features such as the structure and size. The combination of the Early Pearl x Skunk, coming from Switzerland with an extra-fast flowering, and our Black Domina results in a hybrid that is almost 100% indica. It is very easy-to-adapt to any climate or altitude. With seeds, the vegetative period can be prolonged up to 3 weeks later to get 35-40 cm high plants, ready to start flowering. The flowering cycle usually lasts about 7 weeks although some plants may take 8 weeks to fully ripen. Outdoors, they will be ready by the second or third week of September.
