

BH - Led growlight 70 watt

Description

This new ALL CREE version of my famous 70 watt "Hans-panel" now has 6 Cree XPE Deep Red and 2 Cree XBD White leds, as well as 4 Cree XBD Royal Blue and 21 XBD Red leds. The White leds cover the whole spectrum of visible light, while the Deep Red leds optimally stimulate the phytochromes. The external power supply is easily unpluggable.

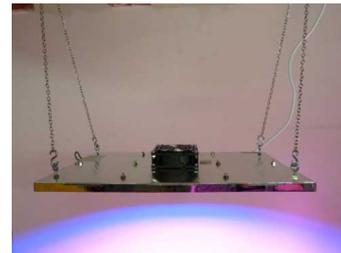

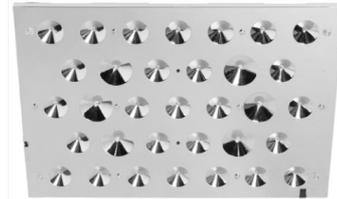

For those of you that are new to my approach; 8 years I've been working on led panels optimised for growing plants for my personal use. Because of the numerous bad led panels on the market, I wanted to investigate if it would be possible to grow the same amount with only half the electrical power of HPS lights. As reported on www.ledgrow.eu, I succeeded in truly outperforming HPS lights, with HPS it would take about twice the amount of electrical power and space to produce a similar amount.

""Danke das alles so super geklappt hat!""

Why Hans Panels?

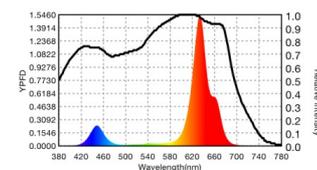

- * There are numerous positive reviews of my panels on the forums, they haven proven themselves again and again
- * I fully understand the importance of continuity, I do my very best to offer service of the highest level. If a malfunction would appear, a replacement will be send immediately, all you need to do is promise to return the defective product.
- * I only use the very best led's, just Cree. The efficiency and of these leds is over 30% better than the cheaper brands like Epistar and Bridgelux, those and worse you will find in the China made products.
- * I think growing with Leds is rapidly becoming accepted, the exclusivity is in the past, in order to stimulate the wide use of Led panels I keep my prices very modest.

These unique led panels with their patented reflectors belong to the very best on the market. My panels have no light losses caused by plastic covers or lenses in front of the led's. And although they are only 70 Watt, they produce at least 35% more light than a 90

Weighted Spectrum

Watt UFO. The LedGrow panels are available directly from the manufacturer, introduction price for this new version is a modest 150€, or 170 US\$ for a 70 Watt panel, power supply included.

Technical information

- * ALL CREE, 60 Watt Cree XBD and Cree XPE DeepRed LED Power, total power consumption max 75 Watt
- * 2 selectable positions; (1) Seedlings, Mothers and Early weeks of flowering, and (2) Full flowering position. Easily selectable by switch
- * NEW: Light output adjustable from 0 to 100% by knob
- * 4 Cree XBD Royal Blue, 21 Cree XBD 701 Red, 2 Cree XBD White and 6 Cree XPE DeepRed Led's
- * Each Led has it's own reflector, either 106 or 123 degrees, therefore optimal control of the light pattern
- * Metal Core PCB for the very best cooling
- * NEW: Smart & Silent fan is controlled by temperature, 0 to 100%
- * No light losses caused by glass or plastic barriers in front of the LED's
- * External waterproof power supply, no heat contribution to the LED's
- * Power supply with 2 meter cable, easily unpluggable
- * Size 26 cm * 38 cm * 4 cm, 10" * 15" * 1.6"
- * Recommended maximum grow area 50*60 cm, 20" * 24"
- * Recommended distance from canopy, 10 to 50 cm, 4" to 12"
- * EU, USA or UK power supply included
- * Reflector easily demountable for cleaning
- * Solid construction, simple industrial design
- * Very quiet, only -42 dB at 30 cm
- * Hanging kit included
- * 2 year warranty
- * Shipping all around the planet
