

BH - Led growlight 100 watt

Description

This is the latest version of the famous Hans-panel, it is optimized for a higher current and delivers 30% more light than the standard 70 watt panel. Both versions belong to the very best on the market today, specially designed for small scale indoor growing of a few plants for personal use. You can optimise the spectrum and amount of light for 2 different phases of your plants life.

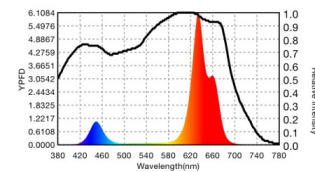

Why Hans Panels?

- * There are numerous positive reviews of my panels on the forums, they haven proven themselves again and again
- * I fully understand the importance of continuity, I do my very best to offer service of the highest level. If a malfunction would appear, a replacement will be send immediately, all you need to do is promise to return the defective product.
- * I only use the very best led's, Cree. The efficiency and of these leds is over 30% better than the cheaper brands like Epistar and Bridgelux, those and worse you will find in the China made products.
- * I think growing with Leds is rapidly becoming accepted, the exclusivity is in the past, in order to stimulate the wide use of Led panels I keep my prices very modest.

Weighted Spectrum

Ref.: McCREEs ACTION SPECTRUM

My panels have no light losses caused by plastic covers or lenses in front of the led's, but they use patented reflectors instead. This 100 watt version will produce at least 50% more light than a 90 Watt UFO. The panels are available, directly from the manufacturer, price is 199€ or 200 U\$ for a 100 Watt panel, power supply included.

""Thank you for your speed of excellent answer!""

Technical information

- * ALL CREE 85 Watt XBD and XPE LED Power, total power consumption max 100 Watt
- * 2 selectable positions; (1) Seedlings, mothers and early weeks of flowering, and (2) Full flowering position. Easily selectable by Switch

- * 4 Cree XBD Royal Blue, 21 Cree XBD 701 Red, 2 Cree XBD White and 6 Cree XPE DeepRed Led's
- * NEW: Light output adjustable from 0 to 100% by knob
- * Each Led has it's own reflector, either 106 or 123 degrees, therefore optimal control of the light pattern
- * Metal Core PCB for the very best cooling
- * No light losses caused by glass or plastic barriers in front of the Led's
- * Power supply with 2 meter cable, easily unpluggable.
- * Size 26 cm * 38 cm * 4 cm, 10" * 15" * 1.6"
- * Recommended maximum grow area 60*80 cm, 24" * 28"
- * Recommended distance from canopy, 10 to 50 cm, 4" to 12"
- * EU, USA or UK power supply included
- * Reflector easily demountable for cleaning
- * Solid construction, simple industrial design
- * Very quiet, only -42 dB at 60 cm, 24"
- * Hanging kit included
- * 2 year warranty
- * Shipping all around the planet
