

BH - Vegging growlight, 90 watt

Description

This is a specialised version of the famous Hans-panel. It delivers more blue light to get bushier plants with shorter internode distances. There is one switch position for seedlings and cuttings, the other is perfect for bigger plants.

Why Hans Panels?

- * There are numerous positive reviews of my panels on the forums, they haven't proven themselves again and again
- * I fully understand the importance of continuity, I do my very best to offer service of the highest level. If a malfunction would appear, a replacement will be sent immediately, all you need to do is promise to return the defective product.
- * I only use the very best LEDs, Cree only. The efficiency of these LEDs is over 30% better than the cheaper brands like Epistar and Bridgelux, those and worse you will find in the China-made products.
- * I think growing with LEDs is rapidly becoming accepted, the exclusivity is in the past, in order to stimulate the wide use of LED panels I keep my prices very modest.
- * The unique design of the LED panels with their patented reflectors spreads the precious LED light very well over the plants
