

MAX-Fan

Max Fan is a unique diagonal tube fan, designed to be efficient, powerful and less noisy. The rotor-stator system makes Max Fan the most efficient fan on the market, taking into consideration both air performance and power consumption.

The rotor pushes the air out in a swirl, while the stator transforms this swirl into a uniform jet of air, preventing pressure loss, noise and unnecessary power consumption. The efficiency rate for Max Fan is 50 %, higher than any conventional one-propeller tube fan, available on the market today.

Max Fan is speed controllable using voltage or frequency control, and as a protection for the motor, it is equipped with a thermal switch, that turns off the motor if it reaches a dangerous working temperature. In addition, Max Fan comes with mounting brackets for an easier use.
