

## Canna - Terra Seed Mix

Only the best is good enough for germinating seeds which is why CANNA has developed a special seed mix. The Terra Seedmix has a highly stable, homogeneous structure which is capable of holding more water. This gives the seeds the best chance of germinating fully.

Extra fine coco fibres have been mixed with the soil in the Seedmix which ensures that the germinated seeds can develop better than in any other medium. This also makes Terra Seedmix particularly suitable for rooting cuttings!
