

THSeeds - S.A.G.E CBD

This is a real sativa/indica balanced plant with big fat leaf structure. Do not give it more than 3 weeks in veg. or use a cropping because the stretch is important. The flowering time is between 8-9 weeks, yields: 450 to 500 psm. She makes great dense flowers and is a big resin producer. The flavor is fresh and smooth with that unique S.A.G.E.® flavor. Good for soil, hydro, aero, coco, but best in organic- this is medicine after all. For the test we used only organic soil and organic fertilizer for the first three weeks in flower, then we stopped and only gave water to see the genetics true potency. We started with 1L pots for 2 weeks and transplanted to a 3,5L for the flowering stage. It produced between 35 and 55 gr per plant.
