

Cibiday - CBD Dabs CO2

A CBD Dab is a cannabis concentrate in the form of wax. This is another option for you to administrate the CBD. It is removed from a portion of hemp, using CO2. This substance is also known as butane hash or CO2 oil.

It can be inhaled using a [vaporizer](#) or other kinds of atomizers, ideal for wax and concentrates. It can also be incorporated in food, but in small quantities as it can cause a very strong effect. Dabbing is one of the newest and purest ways to consume CBD, bringing medical benefits of CBD to the body faster than ever. Ideal for health problems that require a higher concentration of CBD as treatment.

Information is still very limited about the many different uses for CBD, some examples are: diabetes, acne, fibromyalgia, PTSD, schizophrenia, chrons disease, multiple sclerosis, insomnia.
