

AutoPot - easy2grow

The easy2grow system is AutoPot's best selling watering system, it offers maintenance free growing for the greenhouse, polytunnel, garden or home without wasting a single drop of water.

The easy2grow system will water & feed your plants using 8.5 litre pots without the need for pumps, timers and electricity. It provides a fully automatic supply of water and nutrients, with a built in wet/dry cycle to mimic natural systems. Whether using the easy2grow starter kit or multiple easy2grow extension kits on a vast commercial scale this system provides everything the plant requires.

This system can be used as a hydroponic set up or with the medium/substrate of your choice. By operating automatically and reliably the easy2grow system allows gardeners to relax, to go away for weekends and still be sure of healthy plants and bumper harvests.
