

Spectrabox - LED Growlight 360W Pro5

Description

360W Spectrabox Pro 5

The Spectrabox Professional Series of Led Flower Growlights (LFG) is an energy-efficient, durable and fire-resistant alternative to indoor growing.

The 360W Spectrabox Pro 5 features a Flower Booster switch, which can be manually converted when moving to the flowering phase. This simple operation and plug & play installation makes working with the Spectrabox Pro 5 very easy.

Ceramic LEDs

The new Spectrabox Pro 5 is equipped with Ceramic high-power leds. Ceramic LEDs provide more light per watt power consumption and guide heat better so that light output stays much more stable over life.

Dual-beam lenses

The Spectrabox Pro 5 is equipped with Dual-beam lenses. The lenses are each equipped with 3W or 6W high-power LEDs, which ensures optimal light distribution and light penetration. Also, with the Dual-beam lenses, light can be exposed to the top of the crop while the plants receive the full light spectrum, ideal for exposure to crops.

The great advantage of being just above the crop can be the huge increase in light power. The intensity of light increases with the distance, so when the distance is reduced from 30cm to 15cm, plants get four times as much light! For many LED bulbs, the distance between lamp and crop should be at least 25 cm before all the color colors of the individual LEDs mix and thus there is a full light spectrum.

Aluminum housing

With a durable aluminum frame and scratch-resistant covers, the 360W Spectrabox Pro 5 feels robust and solid. And of course, the Spectrabox is performed in the yellow house color it has been recognizable for years and years.

Technical information

- * Application: Growth & Bloom, Bloom, Growth
- * Note Led Flower Growlights
- * Power 360Watt
- * Model SB360Pro-5
- * Number of LEDES: 120 pieces
- * LED diode: Ceramic 3W & 6W
- * Optical lens: Dual beam
- * Photos flux density: ~ 400 $\mu\text{mol s} / \text{m}^2$
- * Height above crop: 0.05 > 2.00 m1 (depending on light requirement)
- * Exposure-able surface: 0.80 > 16.00 m2 (depending on light requirement)
- * Power Consumption: ~ 232 Watt
- * Dimensions: 370 * 370 * 70mm
- * Weight: 4.3 Kg
- * Cooling: Active cooled
- * Number of fans: 4 fans
- * Lifespan: Longer than 3 years
- * Warranty: 2 years
